What is Therapeutic Recreation?
Therapeutic Recreation is a health profession which acknowledges the significance of leisure and recreation as integral components of optimal health and well-being of individuals with illnesses and disabling conditions.

Why is Therapeutic Recreation important?
Therapeutic Recreation is more than simply play, because it uses the power of creative leisure activities to support the rehabilitation process and promote wellness throughout our lives. It has been documented that people involved in therapeutic recreation in a clinical setting heal faster, adjust better to their illness/injury/disabling condition, have improved motor and cognitive function, and reintegrate into the community more readily.

What role do Recreation Therapists play in Alberta?
Recreation Therapists are skilled professionals, with post-secondary education in recreation therapy, who bring research-based knowledge and expertise to the patient/client and care team in a variety of settings.
